Catalog description (Attach a syllabus):
A basic introduction to the use of computer technology for musicians. The course is divided into modules covering music notation; MIDI, digital audio workstation, and synthesizer/sampler plugins; multi-track recording and editing; and web design and construction. Discussion will cover aspects of copyright, content ownership, and online resources for publishing and music distribution.

What are the reasons for the new course (e.g., student needs, major, etc.):
All Conservatory students need basic training in the use of computer technology in music. Besides being relevant to their future goals it is a requirement of the National Association of Music, the Conservatory’s accrediting agency.

If approved, when will this be implemented? Fall X Spring □ Year 2007

What is the anticipated impact on resources (e.g., Faculty, funds, library materials etc.):
Three to four sections of this course will need to be offered because the lab is limited to 18 computers. This will require hiring an instructor to teach these sections.

Describe any special facilities, furnishings, or technology needs. List software needs, if any.
The Conservatory installed a music technology lab during the summer of 2006. All technology courses will be taught within this new facility. No other resources are required.
