Fifty years ago, the first internet-worked message was sent from UCLA to Stanford. This early advancement set the path for nearly everything we do today—from education to politics to staying in touch with our friends. David’s lecture will explore the first 30 years of the internet, from its earliest days as a Department of Defense project to the late 1990s when he and millions of others bought a dial-up modem to surf the World Wide Web. We’ll take a peek at some of the people and organizations that made it happen and some interesting statistics that illustrate just how quickly the internet took off and how it continues to grow today.

Marriage, Mating and Ecology of Wildlife on the African Savannah
SEPT. 30, OCT. 1, 2
Richard Tenaza, Professor Emeritus
Humans employ various social structures that bring male and female together to mate and produce young. This lecture will show that the same mating systems characterize birds and mammals of East Africa, where even equivalents of “bachelor pads” and the strategy of using owned resources, like wealth, to attract temporary or permanent mating partners occur. Questions like why monogamy is the rule in birds but the exception in mammals will be analyzed. Projected photos will illustrate the great variety of birds, mammals and habitats discussed.

The Golden Rule: (How) Is It Still Relevant?
OCT. 7, 8, 9
Alexis Easton, Retired United Methodist Clergy
The Golden Rule (or Ethic of Reciprocity) is a practice affirmed in religions and wisdom traditions. Familiar to Americans as stated in the positive (“Do unto others as…”), more of the worlds’ religions actually frame it in the negative (“What is hurtful to you, do not to…”). Although most people would give a reflexive nod of agreement that it is a valuable guide to ethical behavior, even a brief listen to public rhetoric indicates that the Golden Rule is at present neither wildly popular nor in wide use. Is the Golden Rule still useful for humankind or has its day passed? What is replacing it in our rhetoric and behavior?

Wood Delights: Objects of Beauty
OCT. 14, 15, 16
Said Shakerin, Professor of Mechanical Engineering at Pacific’s School of Engineering and Computer Science
In addition to the inherent beauty in wood, there are specific visual surprises in discarded wood due to insect activities and human impact. Brief descriptions of all steps involved in transforming a piece of neglected wood to something to enjoy will be presented. This transformative process is rewarding and, more importantly, therapeutic. Examples will be given and simple, accessible techniques will be shared to encourage others to consider engaging in similar activities. You will leave the lecture with an enhanced awareness of and appreciation for trees and imaginative ways to look at them.

This lecture will cover the who, what, where, when and why of ransomware attacks, and why they are so difficult to defend against. We will also see how leakware is currently targeting users by threatening to publish stolen information from the victim’s computer system.

The lunch isn’t meant to be a morbid conversation, but a very human one, where we consider what we want, both in life and during its close. Participants will be invited to complete optional surveys before and after the event, so that we can learn about the benefits of this experiential learning activity. Survey participants will be entered in a raffle for a gift card. Must register no later than September 27. Don’t wait to register, because there are limited spots available for the three different lunch days.

To reserve a spot, please contact:
